
CARBON FOOTPRINT

As part of the commitments made by Innova-tsn in the environmental block, the company has worked on a tool that would allow it to obtain an accurate picture of the greenhouse gas emissions generated by its activity in order to carry out planning that could contribute to reducing the organisation's carbon footprint.

To this end, in the first four months of 2023, Innova-tsn's carbon footprint for the years 2019, 2020, 2021 and 2022 was calculated and, in July, it underwent the measurement verification process with an accredited certifying body.

Subsequently, the verification of the carbon footprint for these years was registered in section a) of the Carbon Footprint and commitments to reduce greenhouse gas emissions of the Spanish Office for Climate Change of the Ministry for Ecological Transition and the Demographic Challenge. In November of the same year, the right to use the 'I CALCULATE' seal for the years 2019-2021 and the 'I CALCULATE AND REDUCE' seal for 2022 was granted, which also applies to all Innova-tsn offices in Spain, thus recognising the efforts made by the organisation as a whole to reduce the company's emissions

Registration entails a commitment to present an emissions reduction plan, embodied in the Innova-tsn Plan 2023-2026, which aims to develop and implement a low-carbon strategy to reduce our footprint and improve the environmental performance of our organisation, deepening our commitment to the environment and emissions reduction.

The measurement and verification process was carried out again in 2024 for emissions corresponding to 2023 and recently in 2025 for data from 2024, which have been recognized in all cases by the relevant Ministry.
